

Siml.ai

The platform for AI-based physics simulations

1,200+ USERS

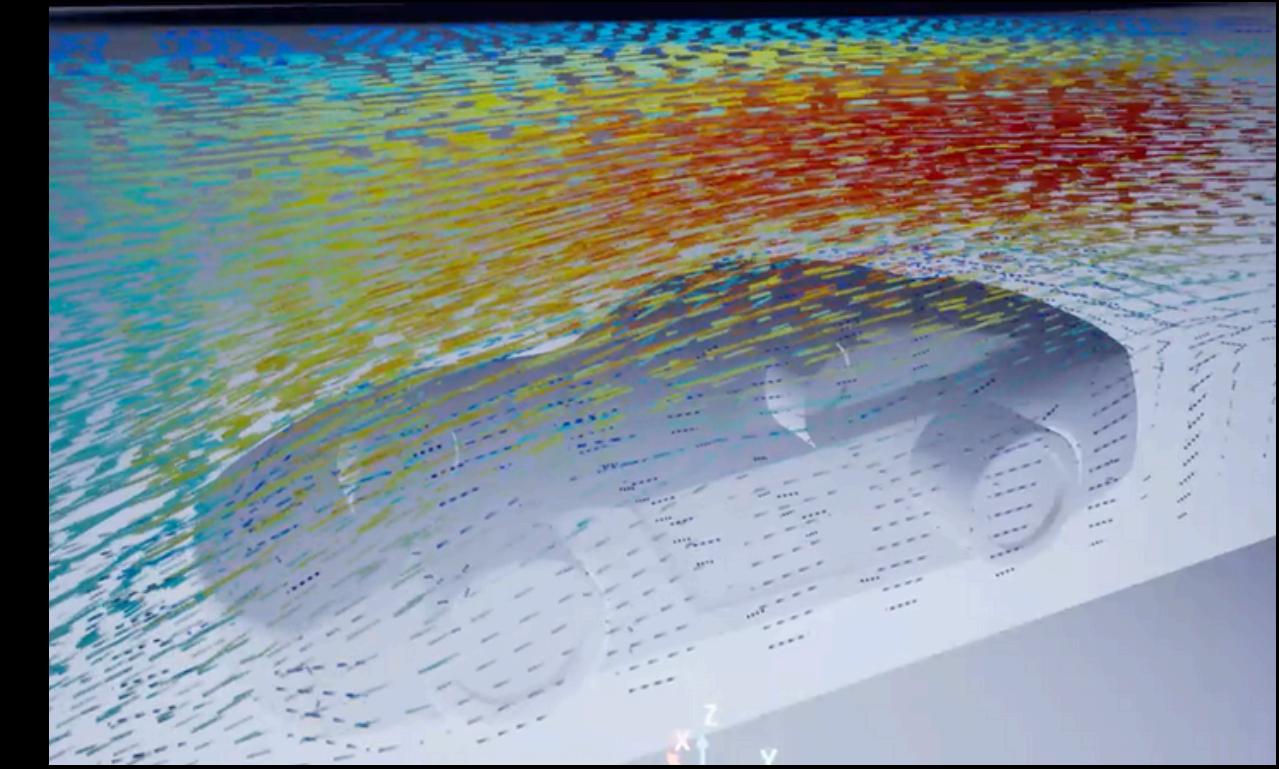

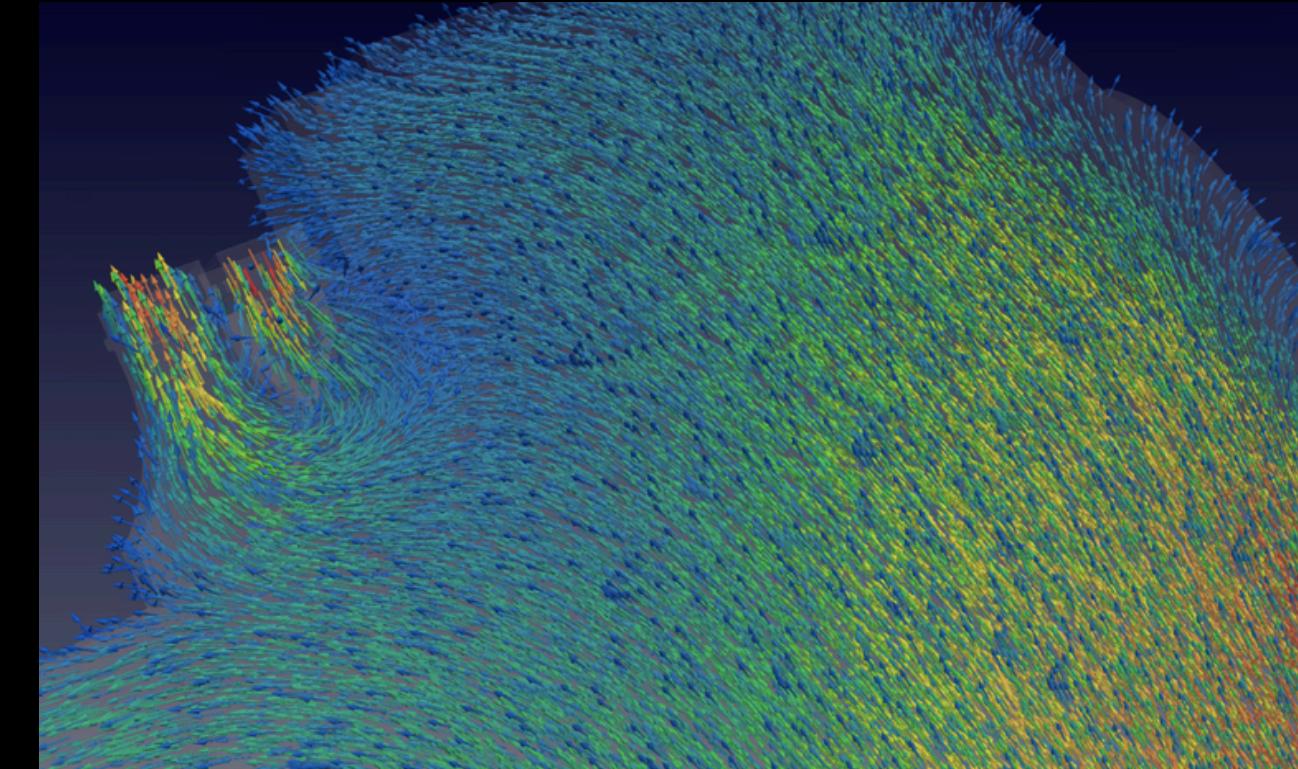

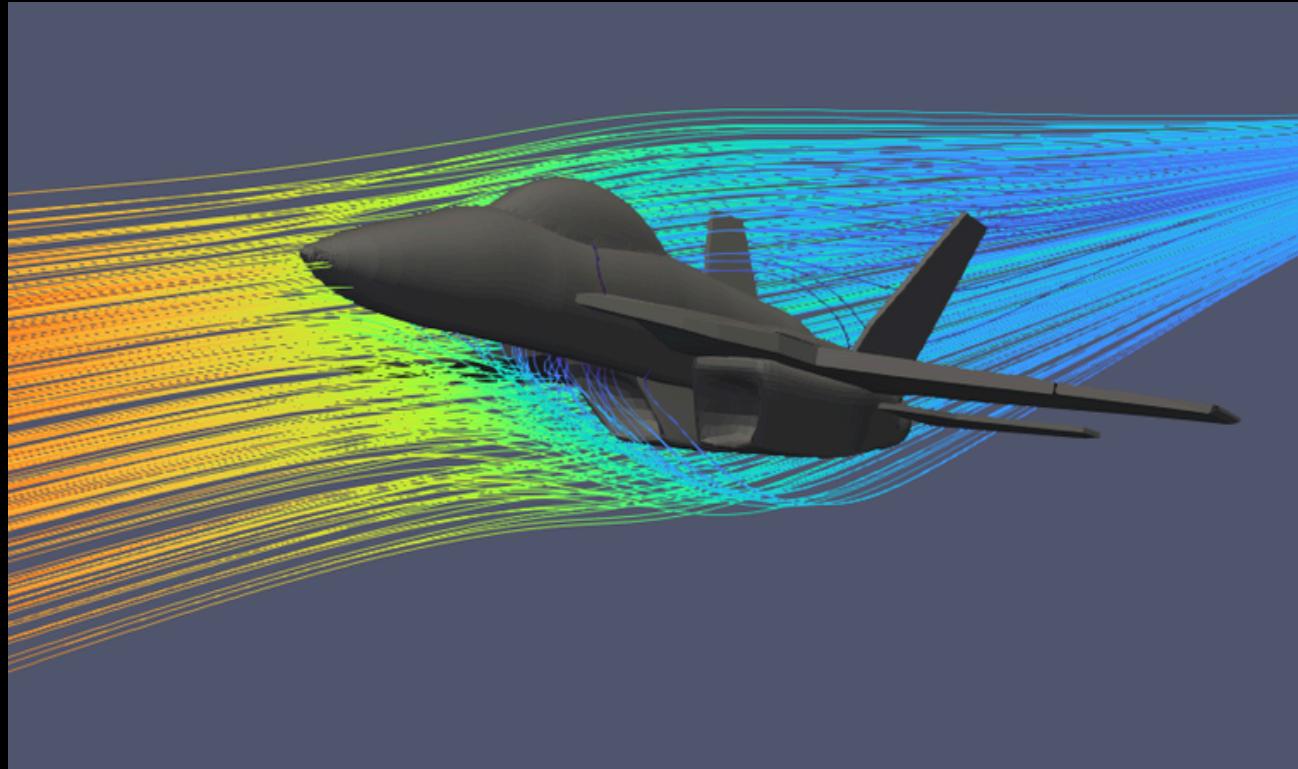

3,900% GROWTH SINCE
ALPHA LAUNCH

Imagine you're designing a hydro power plant. It's critical your solution prevents future mistakes, reduces complexity and cost. Traditionally the process took years and cost millions, requiring expensive compute.

Siml.ai does it 10-1,000x faster

WITH SIML.AI YOU CAN SAVE TIME & COSTS

The time of virtual physics experiments is cut to

HOURS

instead of days or weeks

With AI, simulations are up to

50,000x

faster

Powerful hardware is in the cloud, available in

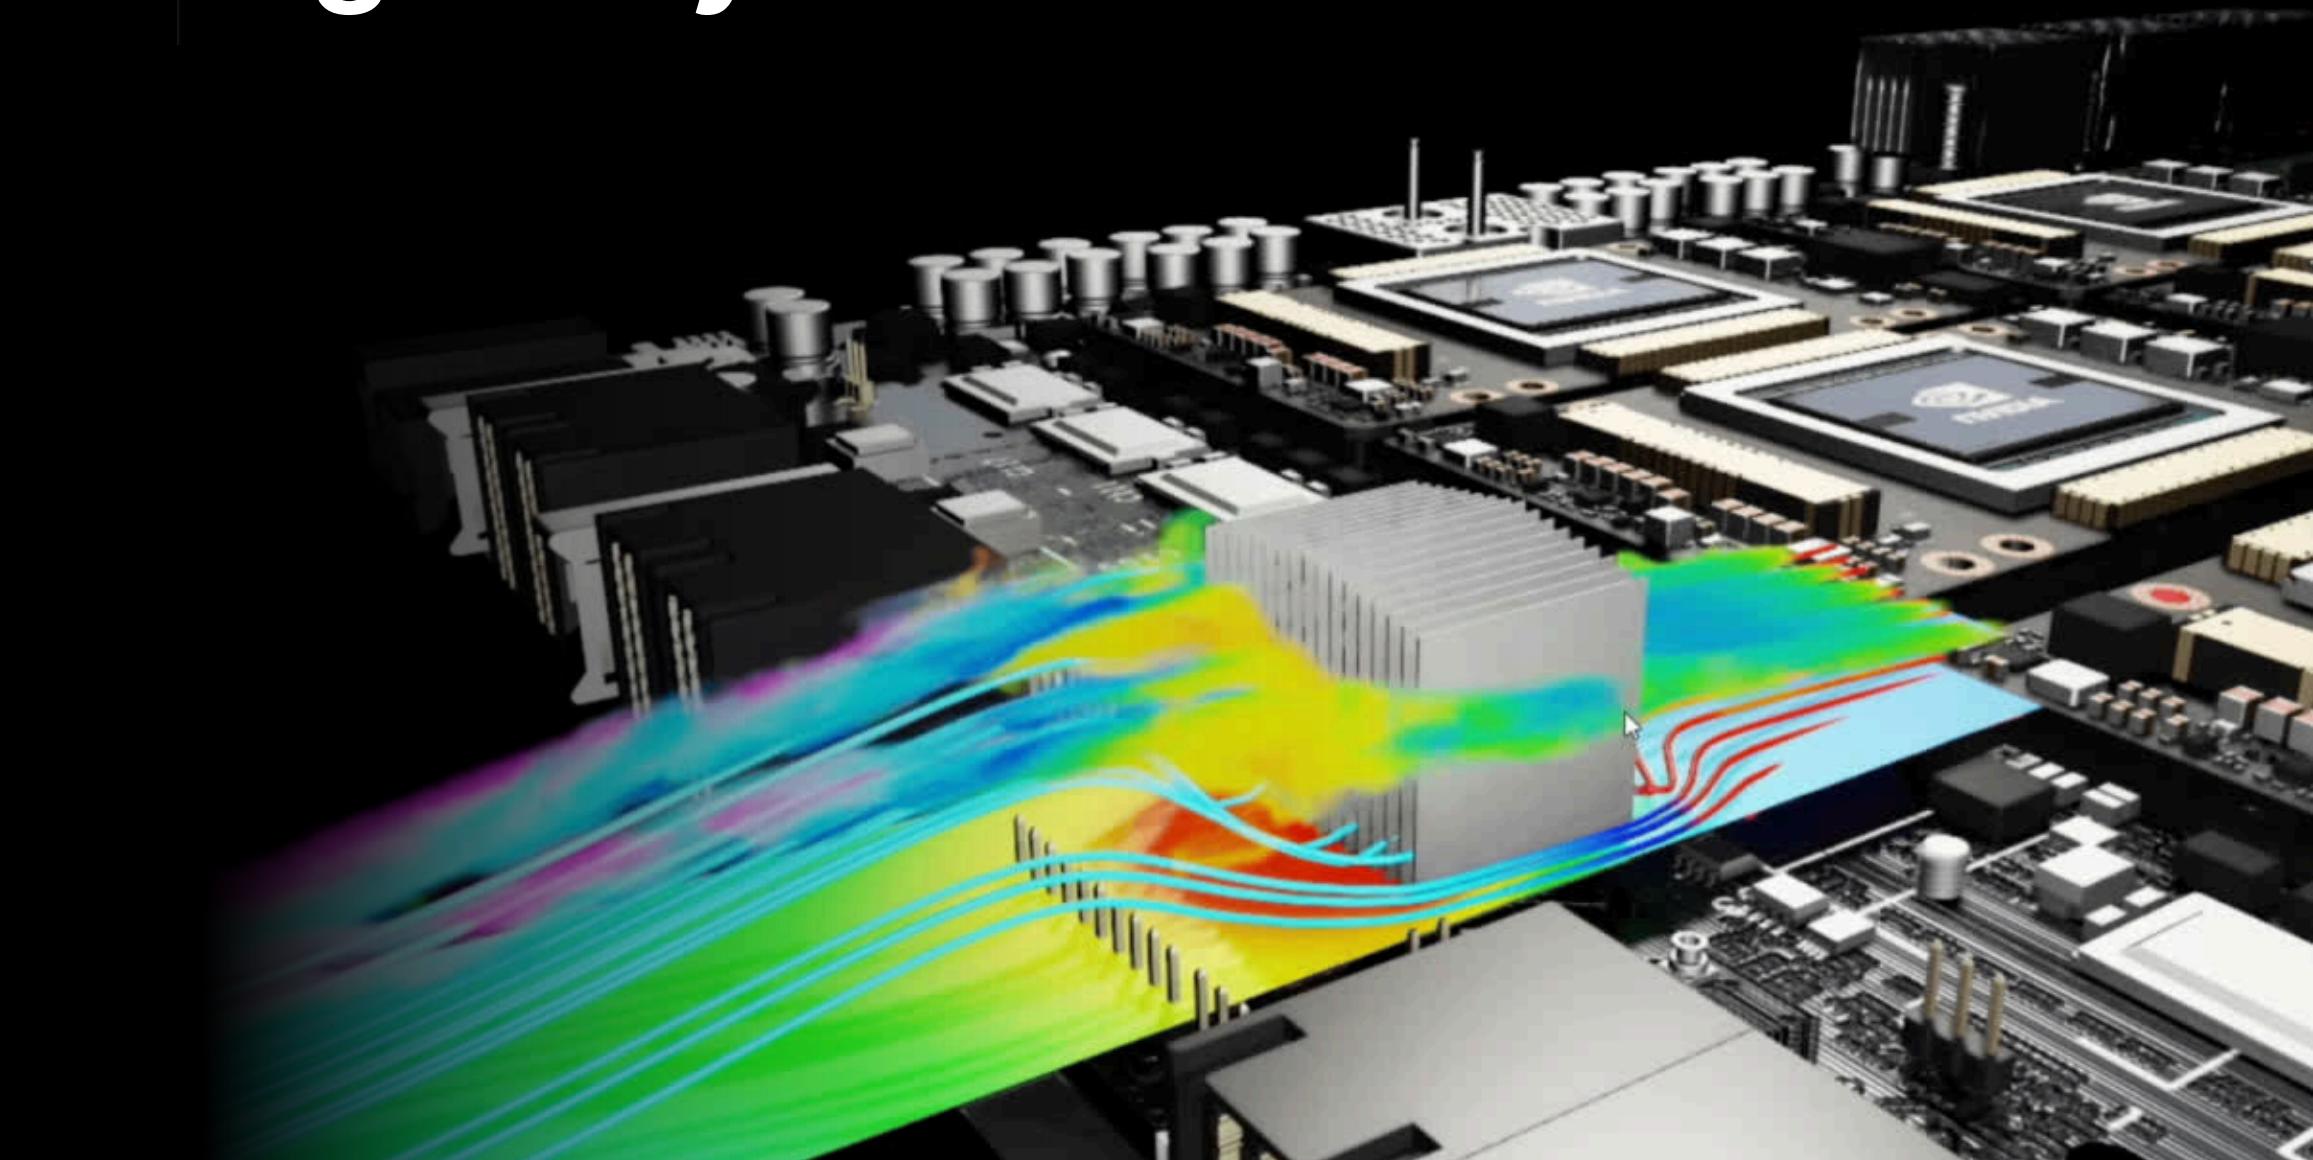

1 CLICK

on the web-based browser

OUR MISSION

To democratise scientific-grade simulation tools by making it easy for **anyone** to develop physics-based simulations and deploy them in their workflows, regardless of their technical skills. By making scientific simulation almost **real-time**, **user-friendly**, and **accessible**, we want to reach all engineers and physics enthusiasts **globally**.

IDEAL CUSTOMER PROFILE (FOCUS ON B2B)

1.

Tech companies relying on
Computational Fluid Dynamics
(CFD) such as:

TESLA

2.

Consultancy companies
providing **simulation services**
to their clients:

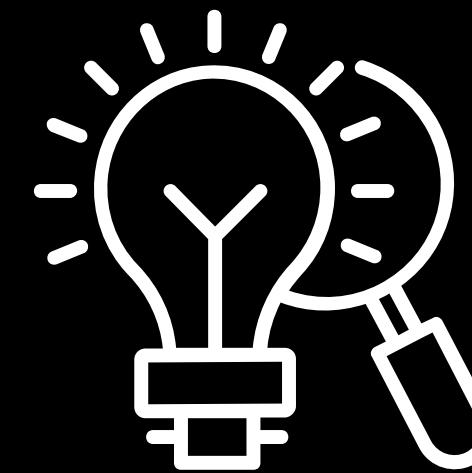

RESOLVED
ANALYTICS

3.

Universities invested in
research in physics-informed
machine learning

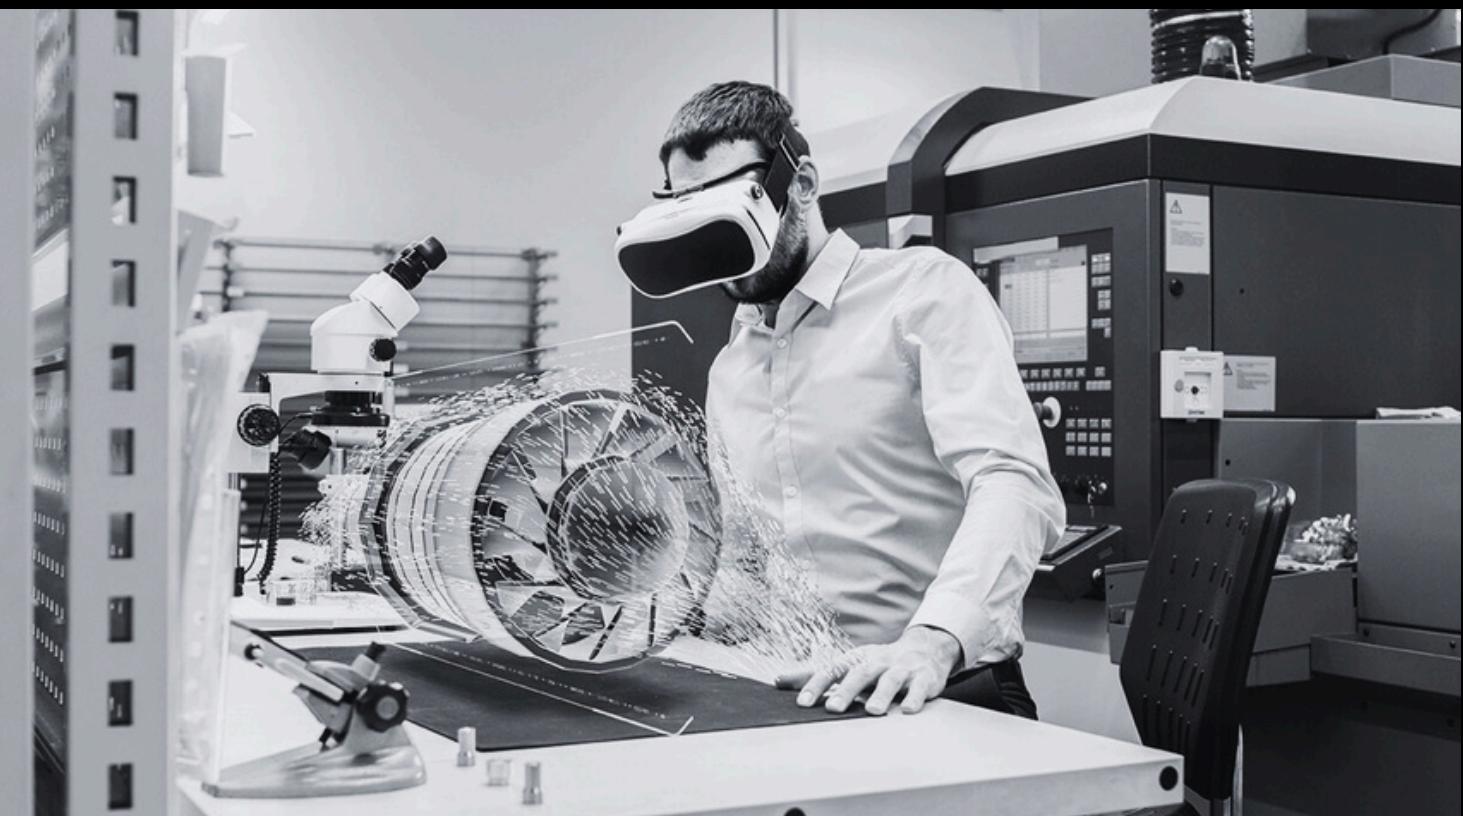

BROWN
UNIVERSITY

IDEAL CUSTOMER PROFILE (FOCUS ON INDIVIDUALS)

1.

Simulation engineers. Works at the engineering consultancy company or/and at the Technical University. They need a reliable, no-code, web-based, fast simulation platform. They create technical analysis about the prototyped product or technology characteristics and in academic setting, they write research papers and use Siml.ai for research data.

2.

Engineering/Physics students. They need reliable scientific simulation software for their research papers and other practical projects. Perhaps they have access to another software through their universities, but the interface is slow and complicated, with an outdated design. They want something modern, fast, and affordable.

COMPETITORS

Traditional CPU/GPU-based simulation software

Modern GPU-based & AI-driven simulation software

COMSOL Multiphysics

Multiphysics, CFD, Heat Transfer and Acoustics Module

Core license: \$5,000+/yr

Price per Module:
One-Year Term: \$4,998
Perpetual: \$9,995

ANSYS

Multiphysics Solver
\$43,000/year

ANSYS Fluent (CFD)
\$29,000/year

HFSS version 9
Starts at \$40,000/year

Monolith AI

Data-driven modeling with no-code AI tool, **cannot use without data**

Focusing on product/technology testing and product design optimization

Automotive, industrial and aerospace

Navasto NAVPACK

Data-driven AI modeling through Blender/Paraview plugin, **cannot use without data**

Focus only on product design optimization

Automotive and marine

Neural Concept

Data-driven AI modeling platform, **cannot use without data**

Heat transfer, design optimization, HVAC, structural mechanics, electromagnetics

Needs training data from simulations created in other simulation SW

What means “Access to Tier X computing resources”?

Running AI model training & inference workflows inside Siml.ai is billed on “**per-minute**” basis **while the server instance is running** in the cloud, **additionally** to the monthly/yearly subscription the user is paying.

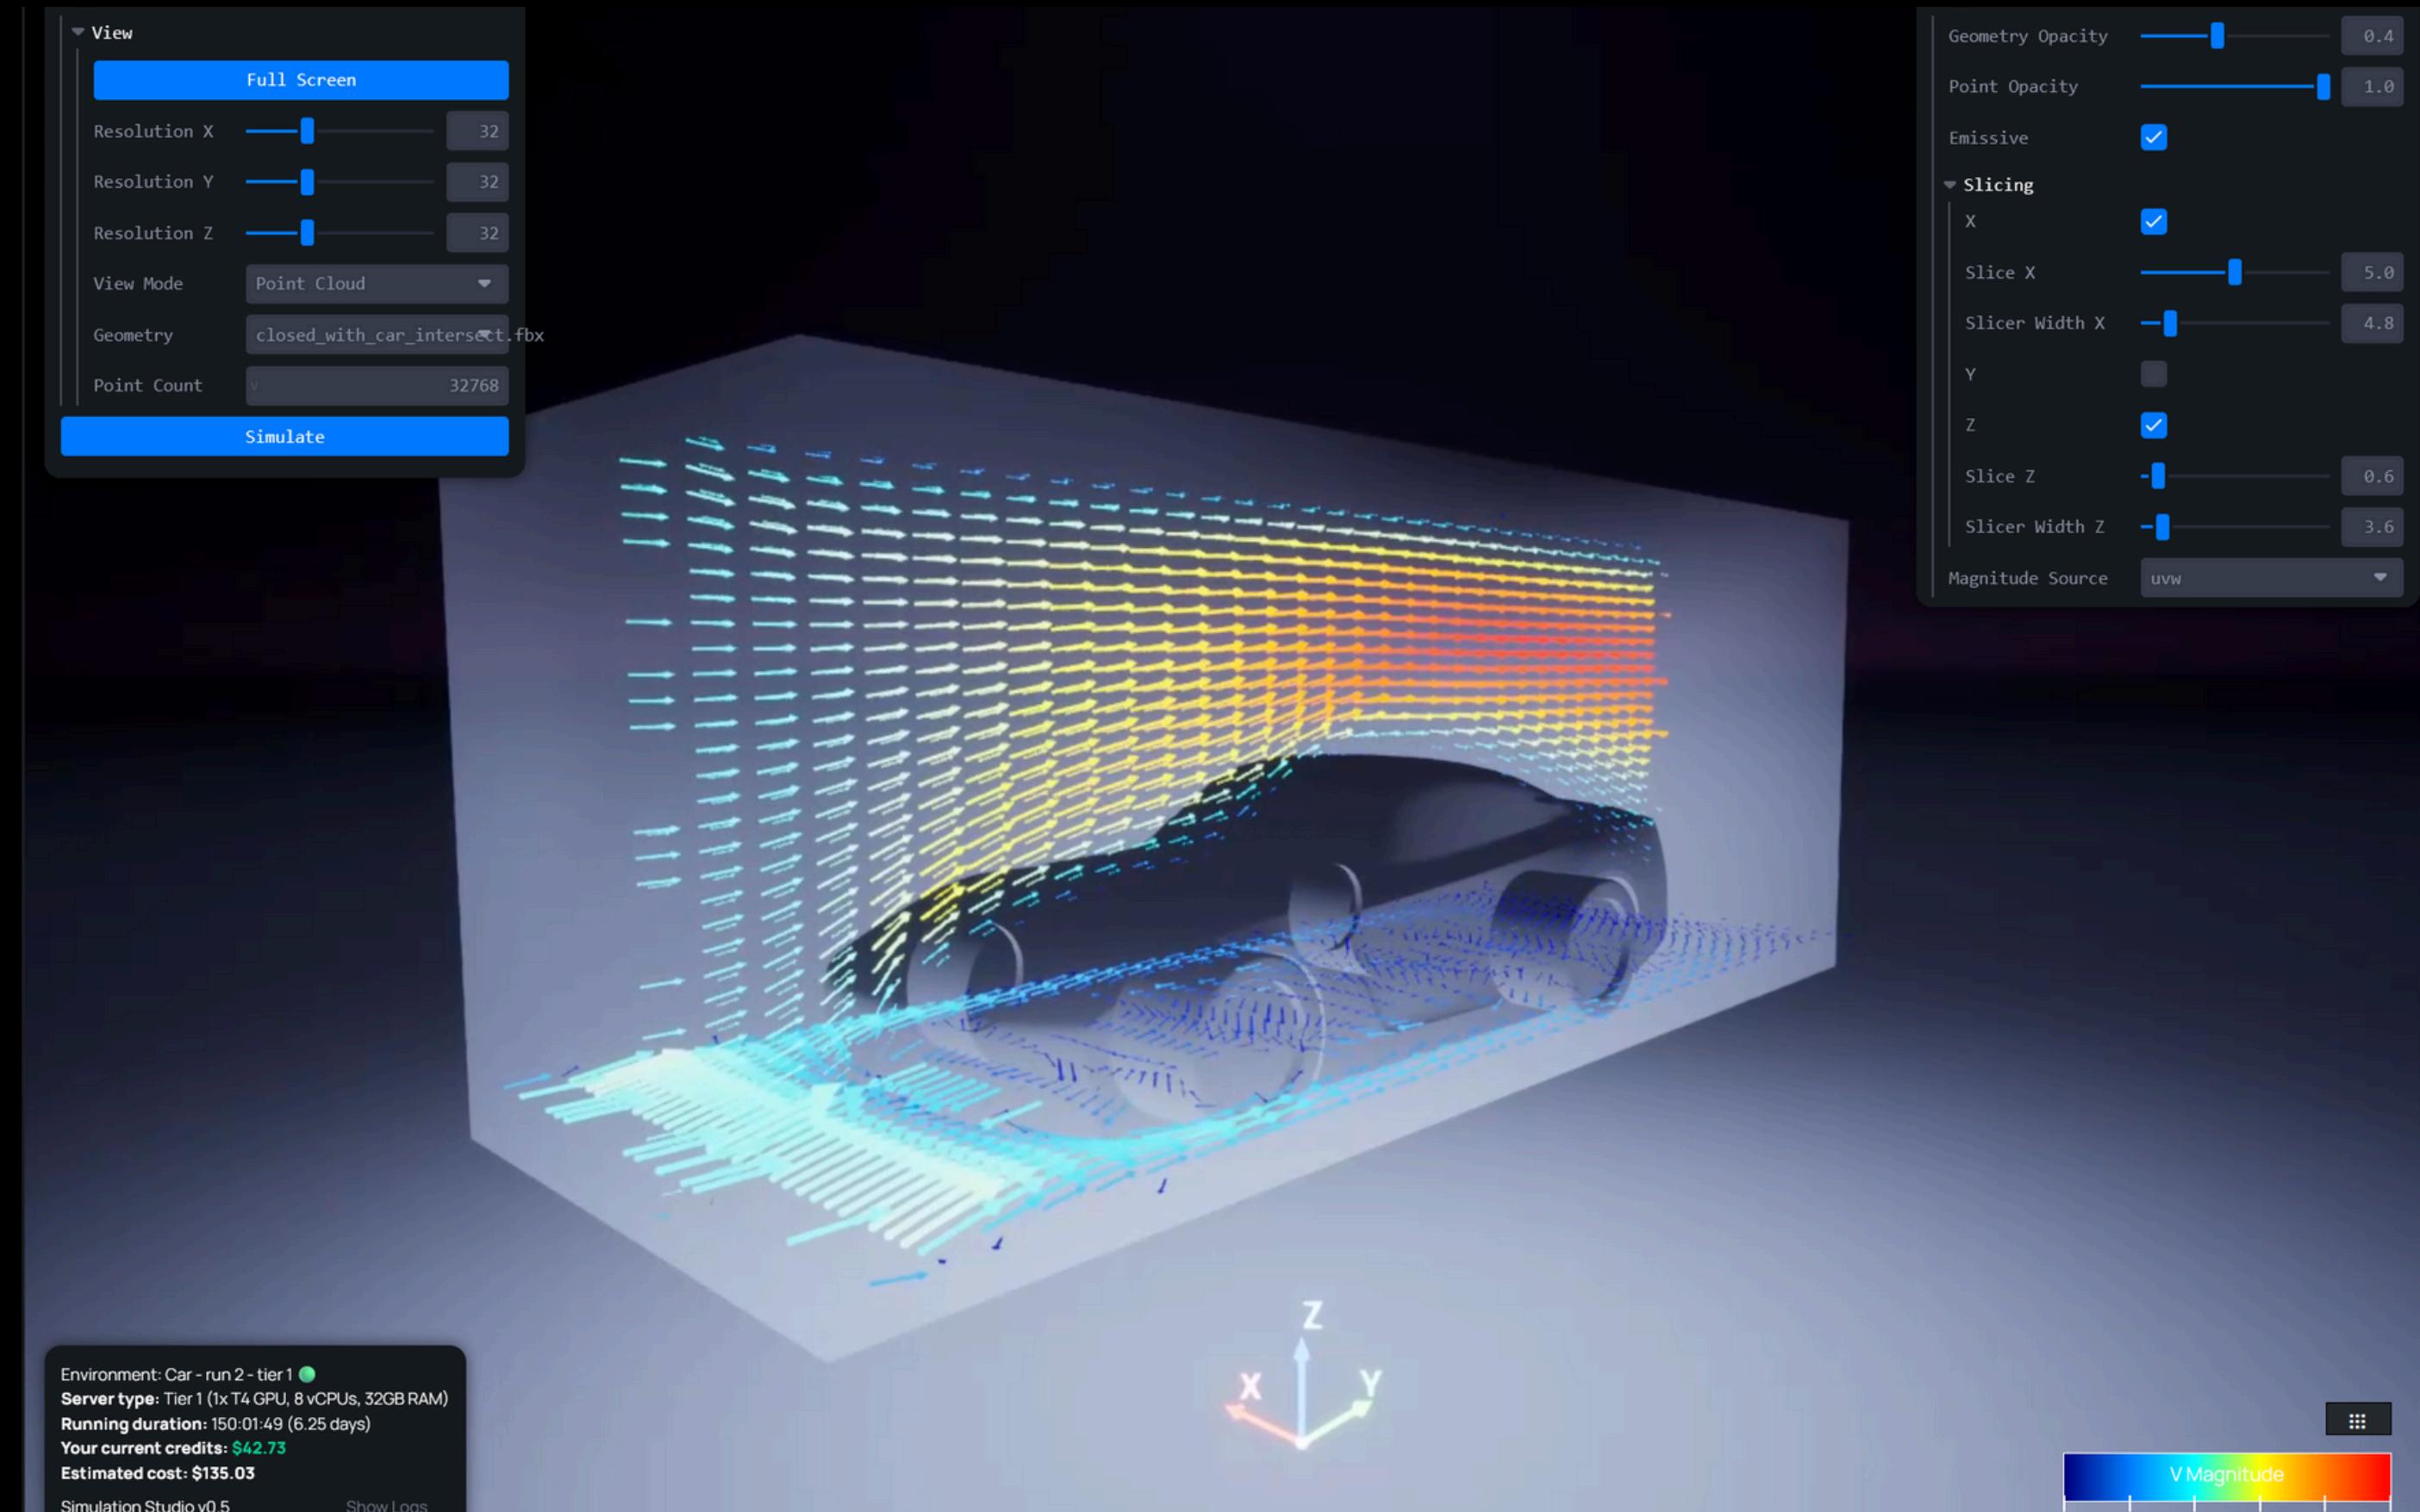

PRODUCT / MODEL ENGINEER

- **Pre-built models** and examples
- **Bundled equations** for multiphysics, CFD, heat transfer, acoustics, seismics, electromagnetics; or **you can implement custom physics solvers yourself**
- **Easy-to-use** visual interface
- **No-code / Low-code**
- **One-click** access to robust cloud infrastructure for training AI models
- Build **interactive web apps** on top of our **Simulator Inference & Training Environment (SITE)**
- **Monitoring** dashboards
- **Dataset preparation**

PRODUCT / SIMULATION STUDIO

- **Interactive visualization tool** for numerical simulation and virtual physics experiments
- Explore hundreds of variations by running **simulations in seconds**
- Automated optimization of complex geometries
- Fastest way to build digital twins that need **real-time physics** simulation

PILOT CLIENTS

DimensionLab is working with **Biomedical Engineering** company to build neural physics simulators to **significantly speed up prototyping** of a **innovative tool intended to fix broken bones** and training **foundational models for generating precise 3D models of cranial implants**.

Siml.ai helps **RFB's engineers increase hydroplant's energy generation efficiency, optimize water structure endurance against strong floods. We achieved 96% cost reduction and cut simulation time from 1 week to 6 seconds.**

Siml.ai is being integrated into **TUKE's software library** used by their researchers for **commercial and research simulations across metallurgy, aerospace, automotive, manufacturing, material science structural mechanics, and civil engineering**.

DimensionLab team developed a PoC **AI model for near-real-time predictive maintenance** of automatic gearbox, which is **5,000x faster than AUFEER Design's proprietary MATLAB-based model**.

Siml.ai was used to create AI simulator that can **analyze 10's of insulator materials for multiple temperatures within seconds, reducing the time-to-market** of Ecocapsule's new v2 model.

PRODUCT VALUE AND GROWTH

Data-driven AI model for predictive maintenance in the automotive industry:

- 99.77% prediction time reduction
- 430x faster (from ~6h to 50 secs)
- 99.88% reduction in compute costs
- 98.52% energy saved, (significant reduction of CO2 trace), unlocking near-real-time iteration times for hardware analysis
- Working on a joint collaboration with Škoda

ECOCAPSULE

Pioneering sustainable living spaces, adaptable to diverse environmental conditions:

- Optimized Heat Transfer in Ecocapsule v2
- Pre-trained simulator for fast experimentations with multiple material properties and outside temperatures between -25°C and +50°C
- 70% enhanced thermal efficiency
- 60% reduced energy consumption

1,200+ users of Siml.ai

MEET THE CORE TEAM

Co-founder & CEO

Michal Takac

13+ years SW engineering experience across various SaaS / crypto / metaverse / AI startups, co-founded 4 startups. PhD in Cybernetics. Slovak Student Personality of the Year 2021 in the category of metallurgy, engineering and energy.

[/in/michaltakac/](https://www.linkedin.com/in/michaltakac/)

Co-founder & CFO

Peter Macinsky

Strategic manager. Peter is a serial entrepreneur in fintech with a strong IT background. Helped to start Solar Turbines (USA) collaboration with R&D team at Ness Košice.

[/in/macinsky/](https://www.linkedin.com/in/macinsky/)

Co-founder & BizDev

Branislav Krsak

Academic consultant in 100+ international projects, PI in 27 projects, R&D commercialization facilitator. Successful and seasoned entrepreneur with rich 20y+ experiences.

[/in/branislav-krasak/](https://www.linkedin.com/in/branislav-krasak/)

Co-founder & VP Eng.

Martin Muzelak

Previously SW engineer at IBM. Finalist at IBM Hack 2019. 2nd place at Falling Walls Lab 2022, PhD candidate in Cybernetics.

[/in/martin-muzelak/](https://www.linkedin.com/in/martin-muzelak/)

Head of Marketing

Andrea Tešanović

A digital marketing specialist seasoned in multimedia production and strategic communications. She has previously worked with United Nations and Ars Electronica, and now specializing in tech marketing.

andreadrev.com
 [in/andreatesanovic/](https://www.linkedin.com/in/andreatesanovic/)

Senior SW Engineer

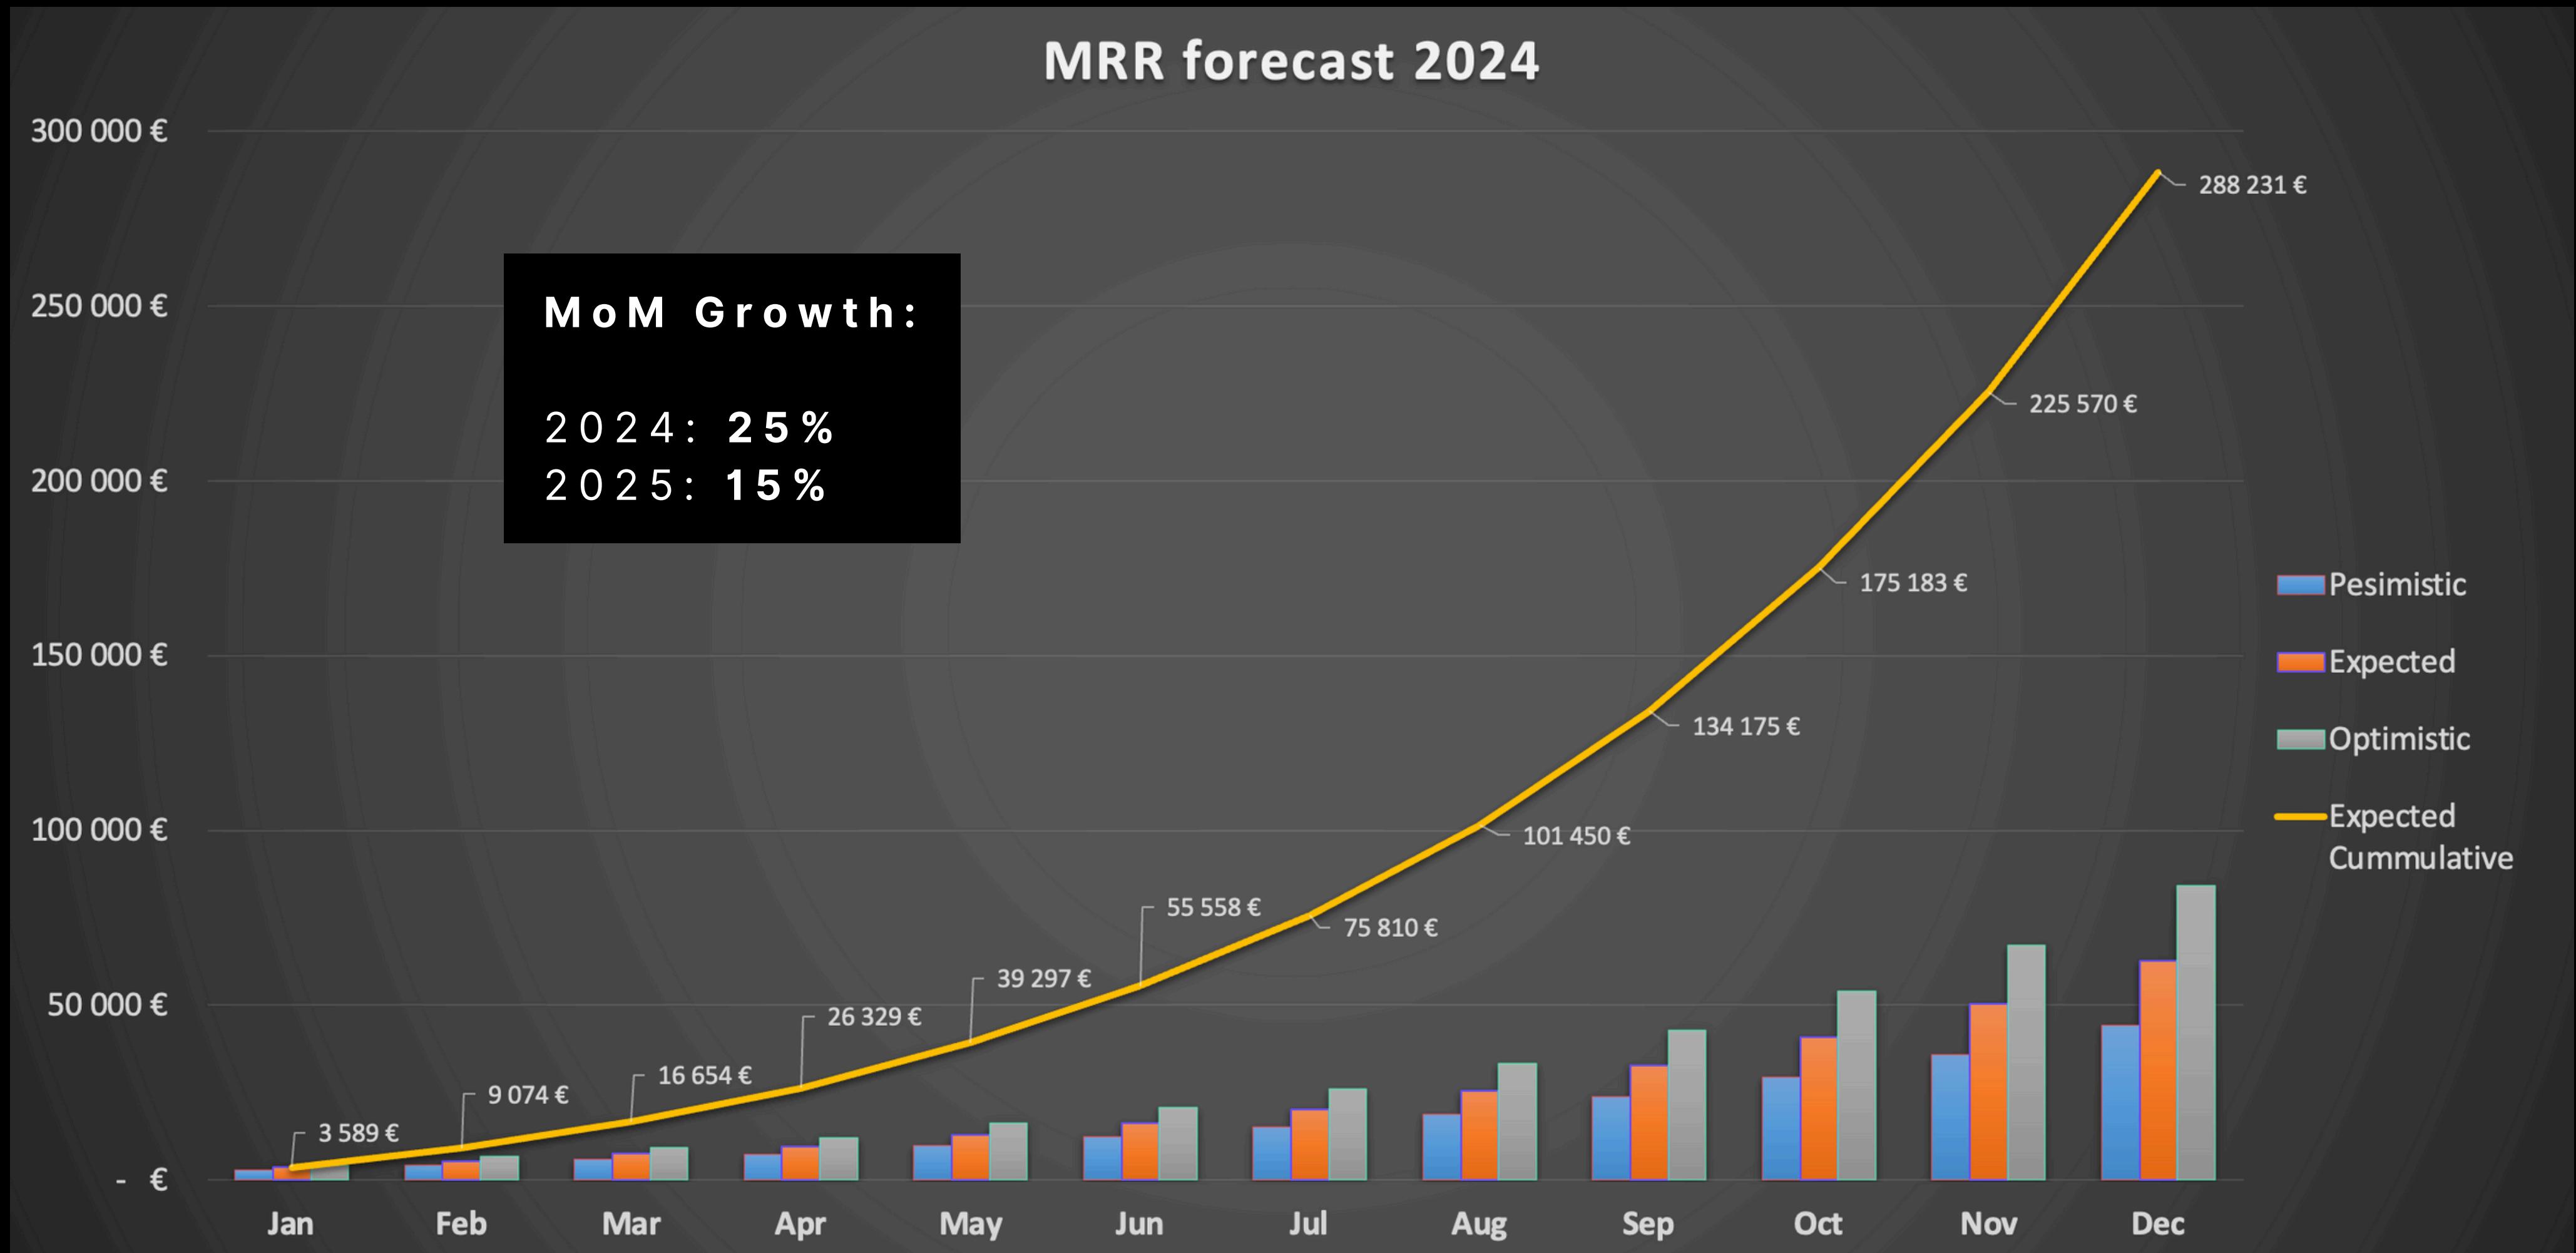

Maros Pekarik

8+ years of experience in SW engineering and interaction design, specialist in virtual spaces and interactive design. Creative technologist active in robotics and immersive media art.

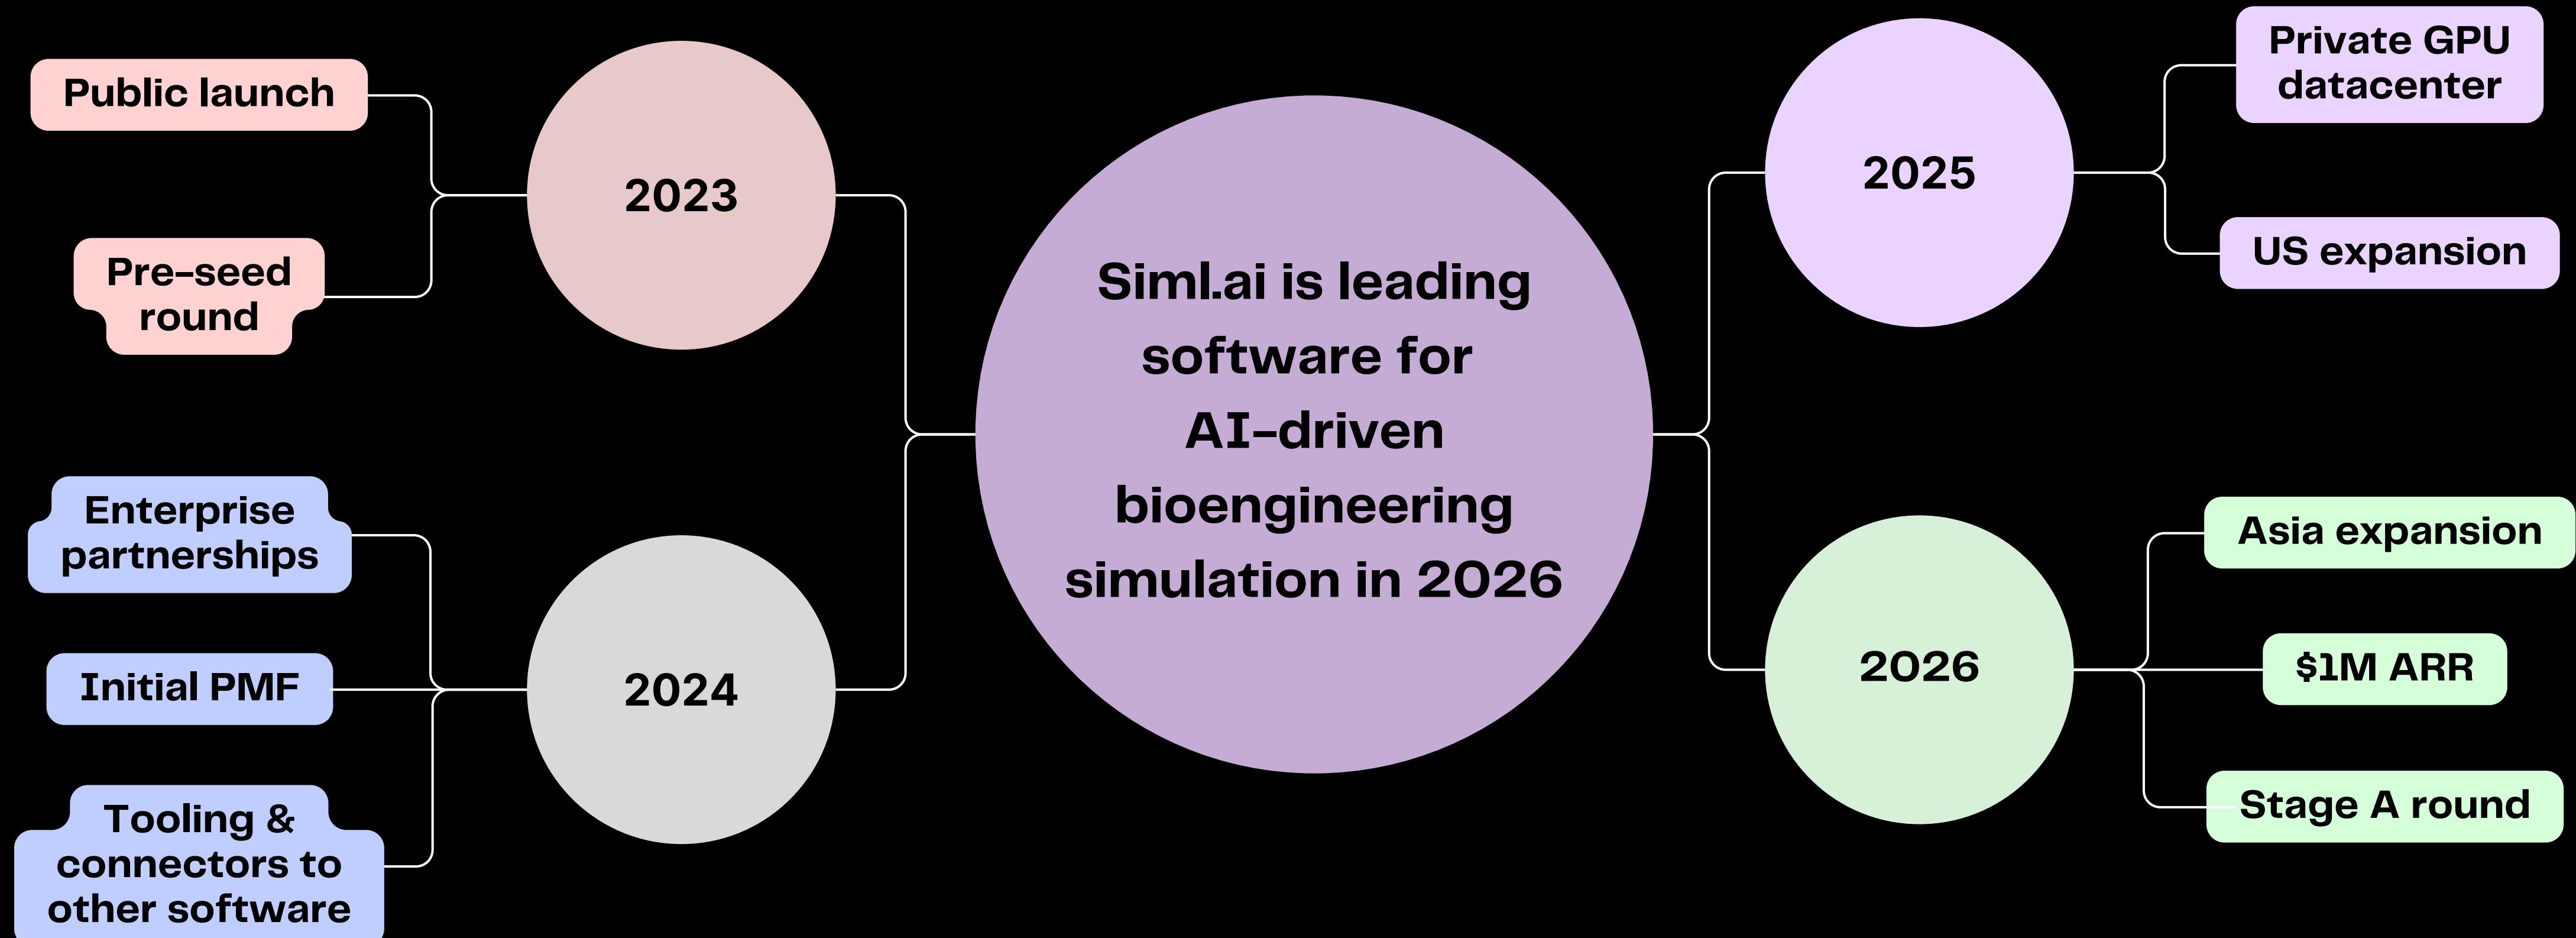

[/in/marospekarik/](https://www.linkedin.com/in/marospekarik/)

FINANCIAL PLAN

4 - YEAR ROADMAP

WE ARE RAISING \$2,5M SEED ROUND

1. Expand team 8 → 20 team members

→ +2 sales, +2 marketing, +2 customer support, +1 design, +3 software eng., +2 ML eng. / data sci.

2. Establish US company for better worldwide presence

→ US Entity establishment (Delaware C-Corp)

→ Dedicated Sales Rep in location of interest (Silicon Valley / Austin / NYC)

3. Siml.ai v1.0 (full release is planned for Q3/2024)

Key features:

→ Building Digital Twins with integrated AI Simulation Engine

→ Establishment of an integrated libraries of CFD datasets for model training and materials properties

→ Users can build interactive customized web apps w/ embedded AI-driven Digital Twins

→ Connectors & integrations / plugins for connecting Siml.ai to established simulation software

4. Goal to reach 5k users by the end of 2024

→ 150+ paying users

→ 30+ enterprise clients (EU & US)
